

PROGRESS REPORT

• What was achieved last week?

Last week, I was able to complete the frontend requirements needed for our midterm presentation. I focused on delivering all the necessary features, and I also enhanced the interface by adding JavaScript-based design elements to improve the overall user experience.

• What is the focus of today?

Today, my main focus is on refining the design of our website. I am working on improving the layout, adjusting styles, and making sure the interface is visually appealing and user-friendly.

• What blockers exist?

One of the challenges I am facing is adapting to a new programming language, particularly JavaScript. Since I am not very experienced with it, I need more time to learn and understand how to properly use JavaScript for functionality and design.

• What went well?

What went well is that I successfully completed the tasks assigned to me by our Project Manager. Additionally, our group members were also able to accomplish their respective responsibilities, which helped keep the project on track.

• What didn't go well?

One issue we encountered was the difficulty in connecting the frontend and backend. It took us a significant amount of time to properly integrate both sides, which slowed down our progress.

• What should we start doing?

We should start improving our communication and conduct more frequent project meetings. This will help us identify problems earlier and resolve them more efficiently.

• What should we stop doing?

So far, most of the errors we encountered were related to individual coding issues. While this is part of development, we should avoid working in isolation without checking compatibility with others' code.

• What should we continue doing?

We should continue maintaining strong teamwork and clear communication among all

members. Collaborating effectively and supporting each other will help us complete the project successfully.
