

PROGRESS REPORT

- **What was achieved last week?**

I achieved this by fixing and updating the code every now and then.

- **What is the focus of today?**

Today I want to focus on the view which shows the data from the deployed API to the deployed Frontend website.

- **What blockers exist?**

The blocker for me this week is trying to show the data on the website.

- **What went well?**

What went well is that no errors occur right now to the website.

- **What didn't go well?**

Is the connection for the GET's from the API because of the authorization for security I found errors when adding data and viewing it.

- **What should we start doing?**

We should start by letting our tester test the program for errors, but so far we still want to finish it and both connect the backend and frontend, especially the deployment.

- **What should we stop doing?**

So for me I still don't find any problems as a group because we now tried to communicate more and our project manager did her best in asking us for updates.

- **What should we continue doing?**

We should continue maintaining strong teamwork and clear communication among all members. Collaborating effectively and supporting each other will help us complete the project successfully.
