PROGRESS REPORT

What went well last week?

Making the backend without much issue as I studied the the .NET framework's structure, though it took days.

What is the focus of today?

Refactoring and Add the models and its logic

What blockers exist?

Some projects that are heavy to the point that we are making an events. There are also debates and specially mention, make-up classes that alters our time management where we suppose to do our works.

What went well?

No "hard to fix" problem in this week and made this progress sail smoothly

What didn't go well?

The communication between our group members

What should we start doing?

We should communicate our progress on what to do and communicate what they need.

What should we stop doing?

Doing things on our own without communicating to the team and manage our time well and impromptu adjust to the time.

What should we continue doing?

Continue studying not only the problem but the structure for more smooth and fun experience making the project.
