PROGRESS REPORT

What went well last week?

No “hard to fix” problem this week and made this progress sail smoothly.

What is the focus of today?

Preparing the refactored system for the logics needed by the system design.

What blockers exist?

Some projects that are heavy, to the point that we are making an event. There are also debates and specially mentioned make-up classes that alter our time management where we are supposed to do our task.

What went well?

Smooth sailing with the architectural refactoring of the core structures for better scalability.

What didn't go well?

The communication between our group members.

What should we start doing?

We should communicate our progress on what to do and help each other to overcome weaknesses.

What should we stop doing?

Doing things on our own without communicating to the team and managing our time well and impromptu adjustment to the time.

What should we continue doing?

Continue studying not only the problem but the structure for a more smooth and fun experience making the project.
