PROGRESS REPORT

What went well last week?

Almost finished RBAC and Auth implementation.

What is the focus of today?

Fixing Role Problem as I made custom role than relying on ASP NET

What blockers exist?

Some projects that are heavy, to the point that we are making an event. There are also heavy projects (eg. roleplay X debate, system design and research defense, outreach design, and vlog video with actions)

What went well?

Almost Done RBAC system

What didn't go well?

Recognizing auth mapping, its kinda hard due to lack of materials. AI can't help since it just throw random stuff according to my question and only my questions is answered. I'm like skipping classes then attend a lesson after a day.

What should we start doing?

Find better materials to study and follow, not just blindly use what finds on the net.

What should we stop doing?

Handing everything on my own without asking for help if problem occurs.

What should we continue doing?

Continue studying not only the problem but the structure for a more smooth and fun experience making the project.
