

PROGRESS REPORT

What went well last week?

The diagram and result I had in mind and the ERD are in sync without an ounce of negative implementation. In addition of progressing and studying what is necessary.

What is the focus of today?

Adding Error Handling.

What blockers exist?

Some projects that are heavy, to the point that we are making an event. There are also heavy projects, events, and specially mentioned make-up classes that alter our time management where we are supposed to do our task.

What went well?

Smooth sailing with the architectural refactoring of the core structures for better scalability and error handling.

What didn't go well?

The communication between our group members and managing time.

What should we start doing?

We should communicate our progress on what to do and help each other to overcome weaknesses. Also, Managing time efficiently, specially this time is where our family goes in vacation and school's event.

What should we stop doing?

Doing things on our own without communicating to the team and managing our time well and impromptu adjustment to the time.

What should we continue doing?

Continue studying not only the problem but the structure for a more smooth and fun experience making the project.
